

VM-550/VM-560 UTILITY LOCATOR

VM Utility Locator Model	Frequency Range
VM-550 Utility Locator	50/60Hz*, 512/640Hz*, 8.19kHz, 83.1kHz & 8kHz FF
VM-560 Utility Locator	50/60Hz*, 512/640Hz*, 8.19kHz, 480kHz & 8kHz FF

The **VM-Series of Utility Locators** are general-purpose locators used to detect buried pipe and cable services in a variety of situations.

With a 50/60Hz passive power locating frequency and three active frequencies, the VM Utility Locators will meet the requirements of those wishing to detect the presence of active power cables and to trace short ranges. The VM Utility Locator transmitters also has the additional frequency of 8kHz Fault-find so it can be used to detect the presence of ground to sheath faults on cable when used with the VM-510 Stand Alone A-Frame fault locator.

The **1-Watt Transmitter** applies a locate frequency by direct connection or induction. Optional Induction Clamps can be used to clamp around a line and induce the locate signal onto it.

* North American versions use 60Hz power and 512Hz low frequency.
* All other versions use 50Hz power and 640Hz low frequency.
